

Developing and managing web-based applications is demanding and complex — whether custom-built or commercial applications, your end-users expect them to work anywhere they're connected. Poor performing web, network, or infrastructure can severely degrade application performance, negatively impact your bottom line. Catchpoint enables you to get the deepest and fastest insight on performance issues before they disrupt your users' experience, achieving business goals and improving dev and ops efficiency.

Deliver Amazing Digital Experiences

Optimize Enterprise Applications

Monitor your business-critical applications such as CRM, SCM, or order fulfillment. This allows you to preempt any performance issues that may negatively affect revenue and ensures optimal employee productivity.

Accelerate Digital Services

Discover problematic areas and baseline performance of web and mobile services to continuously develop and optimize better and faster experiences anywhere, anytime

Improve Multi-Vendor Approach

Gain in-depth insight into all of your services and understand their impact on your end users. Correlate this data with third-party APM metrics to pinpoint the cause of performance bottlenecks.

Trusted by Digital Business Leaders

"The ability to use our actual customer experience in our performance tests while still gathering diagnostic data has been huge."

- Nate Auwerda, VP of Technology, Overstock

Catchpoint Digital Experience Monitoring Platform

Monitor the end-user experience across application, network, and infrastructure layers to preempt issues and improve service delivery.

Monitor More

Monitor all components critical to service delivery, from third-party APIs to server-level performance, in pre- and post-production environments.

Diagnose Faster

Proactively triage issues with intelligent, real-time alerts and contextual guidance that automatically highlight any component affecting performance.

Deliver Better

Understand the business impact that new providers, infrastructure modifications, and design changes have on the end-user experience.

Monitor All Moving Parts

Website	Transaction	Mobile	HTML Code	API	DNS	Ping	Traceroute
FTP	Websocket	TCP	Streaming	SSH	NTP	IMAP	SMTP

Integrated Synthetic & RUM

Visualize and interact with your synthetic and real-user data in real-time on a single, dynamic user interface designed for smarter workflows and faster insights.

Visibility Across Layers

Gain performance insight into online apps, APIs, and services and the individual impact of external supporting providers across the application, network, and infrastructure layers.

Vast Network Coverage

Understand true performance as experienced by your end users with 600 global vantage points that span key geographies, ISPs, and devices.

Real-time, Flexible Analysis

Analyze data in any way you need with robust, pre-built or custom visualizations that use multi-dimensional analytics shortening your time to discovery.
