

Monitoring web-based applications is demanding and complex — whether custom-built or commercial applications, your end users expect them to work anywhere they're connected. Poor performing web, network, or infrastructure can severely degrade application performance and negatively impact your bottom line. Catchpoint enables you to get the deepest and fastest insight on performance issues before they disrupt your users' experience, improving IT ops efficiency and achieving business goals.

Deliver Amazing Digital Experiences

Preempt Performance Issues

Proactively monitor critical applications and infrastructure across all devices, browsers, and networks. Preempt performance degradation before your end user is affected.

Accelerate Troubleshooting

Receive instant dynamic alerts with troubleshooting guidance. Analyze performance components in real time to isolate bottlenecks and reduce mean time to resolution.

Manage Service Delivery

Gain insight into poor performing components across the network, applications, and external providers to optimize and improve service delivery across all of your enterprise brands

Trusted by Digital Business Leaders

"Finding those problems we didn't know we had was one of those things that really helped us get to an industry-leading level of availability."

- Director of Technology Operations, Radial

Catchpoint Digital Experience Monitoring Platform

Monitor the end-user experience across application, network, and infrastructure layers to preempt issues and improve service delivery.

Monitor More

Monitor all components critical to service delivery, from third-party APIs to server-level performance, in pre- and post-production environments.

Diagnose Faster

Proactively triage issues with intelligent, real-time alerts and contextual guidance that automatically highlight any component affecting performance.

Deliver Better

Understand the business impact that new providers, infrastructure modifications, and design changes have on the end-user experience.

Monitor All Moving Parts

Website	Transaction	Mobile	HTML Code	API	DNS	Ping	Traceroute
FTP	Websocket	TCP	Streaming	SSH	NTP	IMAP	SMTP

Integrated Synthetic & RUM

Visualize and interact with your synthetic and real-user data in real-time on a single, dynamic user interface designed for smarter workflows and faster insights.

Visibility Across Layers

Gain performance insight into online apps, APIs, and services and the individual impact of external supporting providers across the application, network, and infrastructure layers.

Vast Network Coverage

Understand true performance as experienced by your end users with 600 global vantage points that span key geographies, ISPs, and devices.

Real-time, Flexible Analysis

Analyze data in any way you need with robust, pre-built or custom visualizations that use multi-dimensional analytics shortening your time to discovery.
